the geometry of desert explores the hidden complexity of moral desert using graphs to  
illustrate and contrast alternative views it carefully investigates the various ways in which  
the value of an outcome varies when people get or fail to get what they deserve

people consider desert part of our moral world it structures how we think about important  
areas such as love punishment and work this book argues that no one deserves anything  
if this is correct then claims that people deserve general and specific things are false at  
the heart of desert is the notion of moral credit or discredit people deserve good things  
credit when they are good people or do desirable things these desirable things might be  
right good or virtuous acts people deserve bad things discredit when they are bad people  
or do undesirable things on some theories people deserve credit in general terms for  
instance they deserve a good life on other theories people deserve credit in specific terms  
for instance they deserve specific incomes jobs punishments relationships or reputations  
the author s argument against desert rests on three claims there is no adequate theory of  
what desert is even if there were an adequate theory of what desert is nothing grounds  
justifies desert even if there were an adequate theory of what desert is and something  
were to ground it there is no plausible account of what people deserve desert collapses  
will be of interest to researchers and advanced students working in ethics and political  
philosophy
